

# Ergonomics in the Classroom: Position for Learning

Maria Kelley & Carolyn Phillips

*with contributions by: Liz Persaud*

[www.gatfl.org](http://www.gatfl.org)

SW Disability Conference  
New Mexico  
October 2013

[www.amacusg.org](http://www.amacusg.org)

# Ergonomics in the School Environment

Promoting full inclusion in educational environments often includes knocking down simple physical barriers by building up everyone's skills and knowledge of the principles of ergonomics and understanding of assistive technology solutions. This presentation will identify ergonomic challenges present in the classroom environment and will provide solutions that can assist with improving posture and enhance the student's ability to focus on learning and promote inclusion.

# Position for Learning

## Session Goals:

- 1. Promote full inclusion of all students in educational environments.**
- 2. Increase participants skills and knowledge in assistive technology and ergonomics.**
- 3. Provide resources for participants so they can educate others and create inclusive classrooms and educational settings.**

# Agenda

1. **Welcome & Introductions – AMAC/TFL & WATAP**
2. **Define & Explore Ergonomics**
3. **Position for Learning:**
  - Classroom
  - Computers
    - Laptops
  - Mobile devices
4. **Position for Eating**
5. **Position for Playing & participating:**
  - Physical education
  - Carnival
6. **Other Considerations:**
  - Backpacks
7. **Tips & Resources**
  - Stretch!

# AMAC

AMAC Accessibility is a social change organization on a mission to create affordable services for governmental, private and non-profits organization working with individuals with disabilities. Services include e-text, braille, captioning, assistive technology, office management software and consulting.

# Accessibility Made Smart

AMAC creates practical solutions that work, with a focus on utility, ease of use, and high quality.

- **Accessibility Consulting** focuses on organizational accessibility needs with evaluation, technical assistance, customer support, and website accessibility solutions.
- **Braille Services** produces customized projects from both print materials and electronic text including partial books and chapters or graphics only using cutting-edge technology.
- **Captioning Services** makes classrooms, meetings, labs and other audio environments fully accessible for deaf or hard-of-hearing.
- **Professional E-Text Producers** provide high-quality e-text in many formats such as PDF, DOC, DAISY, and HTML.
- **Certified Assistive Technology team** provides on-site and remote assessments, demonstrations, training and technical assistance for education, work, and daily living environments.

For more information, please visit our website at [www.amacusg.org](http://www.amacusg.org)

# Tools for Life Mission

We're here to help Georgians with disabilities gain access to and acquisition of assistive technology devices and assistive technology services so they can live, learn, work, and play independently in the communities of their choice.

# University of Washington Center for Technology and Disability Studies

- UWCTDS is an interdisciplinary program within the Center for Human Development and Disability and the Department of Rehabilitation Medicine.
- Projects supported by grants from the U.S. Department of Education, U.S. Health and Human Services, and other funding sources.
- UWCTDS provides research, education, training, policy analysis, and legal advocacy related to assistive technology and accessible information systems.

# Washington Assistive Technology Act Program

## Washington's Federal AT Program

- Provide Assistive Technology resources and expertise to all Washingtonians with disabilities
  - Demonstration
  - Lending
  - Training
  - Re-Use
- Goal to assist with decision making and obtaining the technology and related services needed for employment, education and independent living.

# What is Ergonomics

- Greek word: Laws of Work
- Science that studies work in various environments, and the tools used to perform tasks in those environments
- Goal: match the capabilities and “limitations” of the human body

# Areas of Concern for Students

- Educational Environments
  - Classroom
  - Cafeteria
  - Playground
- Computers
- Mobile devices
- Backpacks
- Recreation
  - Electronics/gaming

# When is an evaluation needed

- Proactive/Prevention
- When working posture is affecting performance, attention, and creating pain
- **TIP: Consider incorporating ergonomic principles into the IEP to support educational goals.**
  - Helps with breathing, circulation, attention, concentration & ultimately learning
  - Must consult with a trained professional
  - Educate everyone – student, family, teachers, paraprofessionals

# Computers

# Ergonomics in the Classroom

## Areas to Evaluate

- Chair
- Monitor
- Desk
- Keyboard & mouse

# Poor Sitting Posture

- Inhibits blood flow
- Creates muscle shortening
- Stresses back muscles and compresses spine
- Can inhibit learning
- Compresses diaphragm
  - Affects breathing
  - Voice quality

# Ergonomics in the Classroom

# Ergonomics in the Classroom

## Stand Up For Your Health

### Physiologists And Microbiologists Find Link Between Sitting And Poor Health

*June 1, 2008* — Physiologists analyzing obesity, heart disease, and diabetes found that the act of sitting shuts down the circulation of a fat-absorbing enzyme called lipase. They found that standing up engages muscles and promotes the distribution of lipase, which prompts the body to process fat and cholesterol, independent of the amount of time spent exercising. They also found that standing up uses blood glucose and may discourage the development of diabetes.

# Chairs

- Proper height for desk or height adjustable if possible
  - boost height in a non-adjustable chair
- Thighs should not be in contact with the front edge of the seat
  - 2" to 3" between front edge of chair and back of knees
  - Use firm pillows or cushions to reduce seat depth
- Adjust the chair so feet are flat on the floor and thighs parallel to the floor
  - use foot rest or seat cushions to achieve proper posture
- If child is wheelchair user feet should make good contact with footplates

# Low cost solutions

- Portable back and seat cushions
- Small pillow or rolled up towel to support low back
- Booster seats, pillows or phonebooks, boxes

Unsupported feet

Low cost solution

# Good Posture

(Cornell University Ergonomics)

# Options

\$125

\$116

# Head posture

- Upright
- Centered/close to midline as possible
- Adjust equipment to improve head alignment

# Upper Extremity Positioning

- Mouse and keyboard surfaces should be on the same plane
- Position close to the user's body to eliminate shoulder strain and neck pain
- Elbows should be kept at a 90 to 100 degree angle
- Avoid bending the wrists when typing; Keep wrists in neutral
- Keyboard trays can help position devices at correct height

# Ergonomics in the Classroom

Don't use

# Ergonomics in the Classroom

## LAPTOP ERGONOMICS

### LAPTOP STAND

Laptop screen should be directly in front of you and at eye level to prevent twisting and bending of the neck.

Use a laptop stand to raise the monitor height so the top of the screen is aligned with your forehead.

Adjust screen tilt to prevent glare.

### MOUSE

Using touch pads and pointing sticks for prolonged periods of time can cause hand pain and cramping.

Connect an external mouse so wrists are straight when using the mouse.

### KEYBOARD

Using a small constricted laptop keyboard for prolonged periods of time can cause hand pain and cramping.

Connect a full-size keyboard and place the keyboard in front of you to maintain a neutral wrist posture.

Elbows should be at a 90° angle and wrists should be straight.

### DOCUMENT HOLDER

Using a document holder keeps your body aligned and prevents twisting and turning of your neck.

Place the document holder directly over the laptop keyboard.

### ERGONOMIC CHAIR

Be sure to sit back in your chair to maintain a supported upright position.

Make sure your knees are at a 90° angle, with your feet sitting flat on the floor or supported by a footrest.

(800) 289-ERGO

cessi:ergonomics Consulting  
an ergonomic company

# Ergonomics in the Classroom

## Writing Solutions:

- “The Penagain takes a novel [ergonomic](http://ergonomics.about.com/od/buyingguide/fr/frpenagain.htm) approach to ink pen design. The body of the pen is shaped like a "Y" creating a cradle for the index finger to rest in.”  
<http://ergonomics.about.com/od/buyingguide/fr/frpenagain.htm>

- Wide barrel pens can make it easier for some people to write due to their contoured shape. With a Fat Ergonomic Pen there's more surface area to grip which makes it easier to write.

# **Position for Learning: Students with Attention Issues**

# Movement Helps Learning!

- 2003 study in *American Journal of Occupational Therapy* concluded that students with ADHD using ball chairs were able to sit still, focus and write more words legibly
- 2007 Mayo Clinic study concluded that a chair-less classroom increased attention and improved learning
- 2008 University of Central Florida study
  - children need to move to focus during a complicated mental task
  - especially those with attention-deficit/hyperactivity disorder (ADHD)—fidgeted more when a task required them to store and process information rather than just hold it.

# Dump the chair?

- Engages core muscles
- Less impulsivity
- Increase focus

<i>Height</i>	<i>Recommended ball size</i>
Under 4'8"	45 cm ball
4'8" to 5'3"	55 cm ball
5'4" to 5'10"	65 cm ball
5'10" to 6'4"	75cm ball

For kids 5 years and younger, always use a 45 cm ball.  
(Exercise Balls for Dummies)

# Other options

**Move Small Ergonomic  
Stool for Children**

**Seating Disc**

**Stay n place ball**

# Fidget Footrests

- Standing desks can help students who find sitting still difficult
- Use of dynamic footrests can help release energy and improve focus

# Mounts and Work Surfaces

- Sit/stand desks
- Tilt Desks
- Portable mounts for devices
- Adjustable monitor arms

# Tilt Desks

- Positioning the work closer the student can improve visual access
- Promote upright trunk posture
- Improve head posture

Desktopdesk.com; \$375

# Tilt Desks

**TherAdapt Extended Easels; \$288**

**Study Pal; \$42**

# Mounts

RAM

RAM

ErgoMart

(RJ Cooper Magic Arm )

# Gaming...The thumbs have it!

# Mobile devices

Can also contribute to poor posture and repetitive motion injuries

Neck strain, nerve compression

# Mobile devices

- Should be accessible for type of selection process
  - Direct selection with hands
  - Stylus
  - switches
- Use mounts to improve upper extremity and visual access

# TFL AppFinder

**Search by:**

# Bridgit

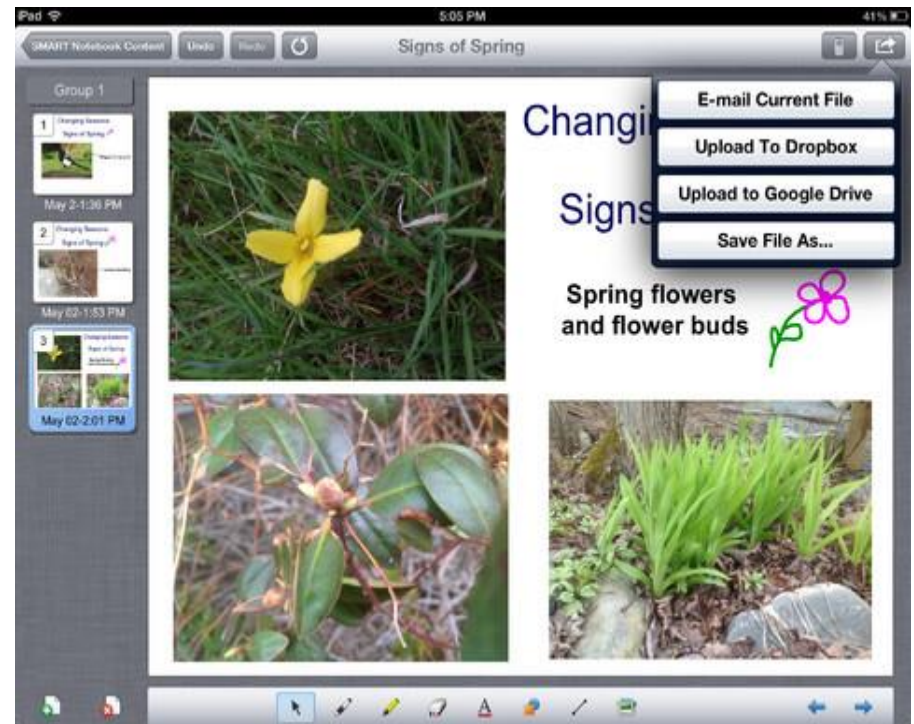

- Use with SMART Board interactive whiteboard
- Display to view content that is being presented and highlight or annotate over that content.
- Create or join a meeting on iPad
- Free

# SmartNotebook for iPad

- Works with SmartNotebook 11 software for Smartboards
- Dropbox and Google file Integration
- Asynchronous collaboration
- Insert photos and sounds

- \$6.99

# Splashtop Whitboard

- Allows teachers and students to turn their iPad into an interactive white board
- Allows movement around the classroom
- Spotlight and Screen Shade tools for focus
- \$19.99

# SkyGrid

- Personalize news events by categories
- Simple interface
- Free
- [www.skygrid.com](http://www.skygrid.com)

# iHomework

- Keep up-to-date with your school work, grades, to-do's, teacher's information
- School organizer that can be with you anywhere you go, whether that be on your iPhone/iPod touch, iPad, or Mac
- \$1.99

# Position for Eating

- Let's consider how ergonomics in the cafeteria can affect a student:
  - Posture
  - Safety
  - Inclusion & Making friends

# Position for Eating

- **Posture**

- Poor ergonomics, like the examples that we discussed, can directly affect a student's ability to independently eat meals at school.
- Leaning to one side or the other
- Positioning arms out of reach
- Feet that are not supported

# Position for Eating

- **Safety**

- Poor posture in general, but especially while eating can lead to diminished breathing. When shoulders are rounded or not balanced they can restrict expansion of the rib cage/breathing diaphragm. Inhalation is compromised.
- Eating while fatigued, under stress or when you are rushed can slow down the digestive process leading to future health problems such as challenges to the immune system.
- Head positioning can directly affect swallowing. Poor head positioning, leaning to one side or the other, forward or back, can cause choking and aspiration.

# Position for Eating

- **Inclusion**

- Often, poor ergonomics while eating results in a quick and sometimes not necessary solution for this activity - provide a Parapro.
- Lunch time is a wonderful social activity for students. This is a time where they can relax, have conversation, and be with their friends.
- Children with that sense of belongingness are not feeling excluded. They are more likely to be able to focus and feel comfortable at school.

# Ergonomics in Sport & Physical Activity

- *Ergonomics in Sport and Physical Activity: Enhancing Performance and Improving Safety* is the first text to provide an in-depth discussion of how the principles of ergonomics can be applied in the context of sport and other physical activities to reduce injury and improve performance. The text blends concepts from biomechanics, physiology, and psychology as it shows how ergonomics is applied to physical activity.

This comprehensive text outlines methods for assessing risk in and procedures for dealing with stress, eliminating hazards, and evaluating challenges posed in specific work or sport environments. It discusses issues such as the design of effective equipment, clothing, and playing surfaces; methods of assessing risk in situations; and staying within appropriate training levels to reduce fatigue and avoid overtraining. The text not only examines sport ergonomics but also discusses ergonomic considerations for physically active special populations.

*Ergonomics in Sport and Physical Activity* explains what ergonomics is, how ergonomists solve practical problems in the workplace, and how principles of ergonomics are applied in the context of sport and other physical activities when solving practical problems related to human characteristics and capabilities. The text shows readers how to improve performance, achieve optimal efficiency, enhance comfort, and reduce injuries by exploring topics such as these:  
Essential concepts, terms, and principles of ergonomics and how these relate to physical activity

- Physical properties of the body and the factors limiting performance
- Interactions between the individual, the task, and the environment
- Injury risk factors in relation to body mechanics in various physical activities
- Injury prevention and individual protection in the review of sports equipment and sports environments
- Comfort, efficiency, safety, and details of systems criteria in equipment design

# Ergonomics on the Playground & PE

- Safety
- Inclusion
- Fun!

# Back Packs

(Google image)

# Back Packs

Pack too big and majority of weight on tailbone

stress on shoulder & neck; asymmetrical posture

# Backpack Maximum Weight Chart (for Children)

According to The American Physical Therapy Association, American Academy of Orthopedic Surgeons, and the American Chiropractic Association

Weight of Child (in pounds)	Maximum Backpack Weight
60	5
60-75	10
75-100	15
100-125	18
125-150	20
150-200	25

No one should carry more than 25 lbs. in a backpack.

# Back Packs

## 1. Two Straps

- Make sure the bag has two straps. Single strapped bags, like satchels and duffel bags, should be avoided. A single strap places the entire load on one side of the body.

## 2. Size

## 3. Wide, Padded Straps

- Wide straps distribute the load over more area of the shoulder. Padding spreads the load as well as alleviates any pressure points.

## 4. Padded Back

- The back should be padded as well.

## 5. Lightweight

- The bag should be light. The lighter the better.

## 6. Waist Strap

- It dramatically helps direct the load away from the shoulders and onto the much stronger waist and hip muscle groups. chance of back pain.

## 7. Compartments

- Having a bag with several compartments helps in two ways.

## 8. Chest Strap

- A strap across the chest from shoulder strap to shoulder strap is a small, but worthwhile improvement. It also fights the urge to slouch.

# Back Packs

- Size of the backpack should fit the child
- Both straps should be used
- Bottom of the pack should not sag and rest on the buttocks
- Don't overload
- Consider using rolling backpacks

# Resources

The screenshot shows a web browser window displaying the 'Ergonomics 4 Schools' website. The browser's address bar shows the URL 'http://www.ergonomics4schools.com/learningzone'. The website has a dark blue header with the 'Ergonomics 4 Schools' logo on the left and the text 'THE LEARNING ZONE' in large, orange, outlined letters in the center. Below the header, there is a green banner with the text 'Welcome to the Ergonomics 4 Schools Learning Zone'. To the left of this banner is an icon of a person with a question mark, and to the right is an icon of a person. Below the banner, there is a grid of 21 topic buttons, each with a magnifying glass icon and a topic name. The topics are arranged in three columns. At the bottom of the page, there is a line of text indicating that more topics will be added in the next few weeks.
